Koray Devecioglu

Software engineer

BASED Eindhoven, Netherlands EMAIL hi@koraydevecioglu.com WEB koraydevecioglu.com
GITHUB koray-devecioglu LINKEDIN koraydevecioglu

Software engineer with a decade of experience across embedded systems, networking, and connected products. Currently building smart lighting experiences for Philips Hue at Signify; previously worked on embedded Wi-Fi at Airties, tactical and consumer networking at NETAŞ, and image processing at EVSTEK. Comfortable from kernel-level C up to product-shaped problems.

EXPERIENCE

Software Engineer · Signify — Jun 2022 – Present
Eindhoven, Netherlands

- Build reliable, scalable smart lighting experiences for Philips Hue, focused on connected-system interaction and reliability.
- Work across cross-functional teams to integrate intelligence into everyday environments and improve product experience.
- Apply systems and problem-solving skills to performance and reliability challenges in smart lighting technology.

Senior Software Engineer · Airties — Nov 2020 – May 2022
İzmir, Turkey

- Led design and development of embedded software in C for Airties' Smart Wi-Fi portfolio.
- Specialised in Linux kernel and IEEE 802.11; ran delivery on Agile cycles.
- Tailored software features for major operator clients including AT&T and Vodafone.

Software Design Expert · NETAŞ — Oct 2019 – Nov 2020
İstanbul, Turkey

- Designed and developed Dynamic Load Management algorithms for Electric Vehicle charging in C++.
- Built a desktop GUI for the Vehicle Charging Simulation app using RAD Studio C++ Builder.
- Implemented networking layers including DHCP, IPSec, and ZeroMQ for the platform.

Software Design Engineer · NETAŞ — May 2016 – Oct 2019
İstanbul, Turkey

Embedded networking work split across two long-running projects: TASMUS (3+ years) and the ZTE Home Gateway Localization (6+ months).

- TASMUS — developed embedded software and IP-based communication protocols in C/C++ for the Turkish Armed Forces' Tactical Field Communication System.
- TASMUS — implemented OSPF, BGP, PIM-SM, MSDP, IGMP, DHCP, ECMP, and load-balancing across TCP/IP, UDP, IPv4/IPv6, and async networking stacks.
- TASMUS — designed routing architectures, application-specific protocols, and UI components; maintained design and technical documentation in JIRA / ClearCase.
- ZTE — collaborated on a technology-transfer project between ZTE (China) and NETAŞ (Turkey), including a one-month on-site stint with ZTE R&D in China.
- ZTE — built modem web interfaces using TR-069, JavaScript, HTML, CSS, and Lua in a multicultural R&D environment.

Software Engineer · EVSTEK Information Tech — Dec 2015 – May 2016
Kocaeli, Turkey

- Designed and implemented digital image-processing methods in C++.
- Modelled and simulated project features in MATLAB and Simulink against spec.
- Maintained and extended user-interface software.

EDUCATION

M.Sc. · Electronics and Communications Engineering · Kocaeli Üniversitesi — 2016 – 2018

B.A. · Business Administration · Anadolu Üniversitesi — 2012 – 2016

B.Sc. · Electronics and Communications Engineering · Kocaeli Üniversitesi — 2011 – 2015

SKILLS

LANGUAGES	C · C++ · Rust · MATLAB · JavaScript · Lua
SYSTEMS	Linux kernel · Embedded systems · TCP/IP · IPv4/IPv6 · Async networking
NETWORKING PROTOCOLS	IEEE 802.11 · OSPF · BGP · PIM-SM · MSDP · IGMP · DHCP · IPSec · TR-069 · ZeroMQ
PRACTICE	Digital image processing · Agile delivery · Cross-functional collaboration · Technical documentation

SELECTED PROJECTS

koraydevecioglu.com

Mar 2026 – Present

This site. Astro 5, TypeScript strict, Tailwind v4, MDX, built content-first with a Zod-validated collection layer and a typed résumé pipeline.

— Milestone-driven build with per-phase PRs and a reproducible local gate.

— Zero-cookie analytics, self-hosted variable fonts, dynamic OG images at build time.

Astro · TypeScript · Zod · Tailwind v4
