Placeholder summary — replace. Two or three sentences that explain what Koray builds, what he's good at, and what kind of problems he's looking for next. Voice stays the same as the blog: concrete, direct, no corporate fluff.

EXPERIENCE

Senior software engineer · Northwind Systems — Jun 2023 – Present
Remote

Placeholder role. Platform team for a multi-tenant B2B SaaS, focused on reliability and developer experience.

- Designed and shipped a typed event bus that replaced three ad-hoc pub/sub mechanisms, cutting onboarding time for new services from days to hours.
- Led the migration from a monolithic Postgres to per-tenant schema isolation — zero downtime, 40% reduction in noisy-neighbour latency.
- Mentored two engineers through promotion; authored the team's incident-writeup template now used org-wide.

Software engineer · Contoso Logistics — Sep 2020 – May 2023
Istanbul, Turkey

Placeholder role. Owned the routing engine for a same-day delivery platform across three countries.

- Rebuilt the ETA estimator around a streaming model; reduced MAPE from 18% to 7% on the top three metros.
- Introduced property-based testing into the routing codebase; regressions-found-before-prod went from 40% to 85%.
- Shipped the driver-facing iOS app's offline-first queue — held up through a regional ISP outage that used to take ops offline.

Junior software engineer · Fabrikam — Aug 2018 – Aug 2020
Istanbul, Turkey

Placeholder first role. Backend squad for a consumer-facing e-commerce site.

- Cut the checkout API's p95 latency from 1.1s to 280ms by precomputing cart totals and reworking the tax pipeline.
- Wrote the team's first load-test harness; findings drove a rewrite of the inventory reservation path.

EDUCATION

B.Sc. · Computer engineering · Placeholder Technical University — 2014 – 2018

SKILLS

LANGUAGES	TypeScript · Go · Python · SQL · Shell
SYSTEMS	Postgres · Redis · Kafka · Docker · Kubernetes · AWS
PRACTICE	Distributed systems · API design · Performance engineering · Mentoring · Incident response

SELECTED PROJECTS

koraydevecioglu.com

Mar 2026 – Present

This site. Astro 5, TypeScript strict, Tailwind v4, MDX, built content-first with a Zod-validated collection layer and a typed résumé pipeline.

— Milestone-driven build with per-phase PRs and a reproducible local gate.

— Zero-cookie analytics, self-hosted variable fonts, dynamic OG images at build time.

Astro · TypeScript · Zod · Tailwind v4
